

Correct 8cm Cable Connection & Suspend way

The design of 8cm cable is keep the straightness of the cable tail area which connect with screwdriver to achieve better protection.

In the picture from right side, you can see the place we hold on the cable, It is the best place to hang the spring balancer in customers' production area.

The best solution is to set the power controller above the screwdriver, so that the cable can bend down naturally and keep the cable tail as straight as possible, reducing the force to the cable tail.
